Vision

1. Vision Statement

This application is a dating platform specifically designed for IT professionals who are looking for meaningful connections with like-minded people. Unlike traditional dating applications, it combines personal interests with professional and technical profiles to create smarter, more relevant matches. The platform further distinguishes itself by recommending and coordinating the first date, streamlining the experience from match to meeting.

2. Product Features

- **User Registration and Profile Creation**
  - Allows IT professionals to create and maintain a personal account and build a comprehensive profile
  - Profiles capture both personal and professional information to support meaningful and relevant connections
- **Automated Match Recommendations**
  - Automatically identifies potential matches based on compatibility across personal interests, values, and professional attributes
  - This reduces manual searching and increases the likelihood of compatible connections
- **Guided First-Date Planning**
  - Recommends a suitable time, location, and activity for a first meeting between matched users
  - This feature simplifies the transition from online interaction to an in-person meeting
- **Post-Date Feedback and Survey**
  - Collects feedback from both participants after the first date through a short survey
  - This information can be used to improve future match quality and enhance the overall user experience
- **Membership Subscription Management**
  - Allows the user to subscribe to the service through a recurring monthly membership
  - Paid membership unlocks full access to matching and interaction features
- **Secure Payment Processing**
  - Supports secure payment using commonly accepted payment methods such as Visa and Mastercard
  - This ensures a safe and trustworthy transaction experience for users
- **Limited Profile Access for Non-Members**
  - Allows non-members to browse profiles in a restricted, read-only manner
  - This gives potential users insight into the platform before committing to a subscription

3. Target Market/Opportunity

IT and Tech professionals between the ages of 25 and 45

4. Competitors

4.1 **BoardRoom:** Dating app geared towards professionals, with LinkedIn verification

Strengths:

- LinkedIn verification helps ensure users are legitimate professionals
- Reduces fake profiles and increases credibility
- Appeals to career-focused users who value professional identity

Weaknesses:

- Broad professional focus; not specifically tailored to IT and tech professionals
- LinkedIn-based verification may exclude freelancers, open-source developers, and professionals without traditional industry backgrounds.
- Overemphasis on professional status may discourage users seeking more personality- or interest-based connections

4.2 **EliteSingles:** Dating app for high-status and career-focused individuals

Strengths:

- Strong emphasis on education and career achievement
- Appeals to users seeking serious, long-term relationships
- Established brand with a large, global user base

Weaknesses:

- Less appealing to younger professionals and early-career users
- Limited focus on tech or IT-specific matching
- Does not address the unique lifestyle or interests of a portion of tech workers

5. Risks

5.1 Business

1. **Low User Adoption:**
   - There is a risk that IT professionals may not see enough value in using a niche dating application and may prefer to stay on a more established dating platform. This could limit the number of active users on the system.

2. **Subscription Pricing Resistance:**
   - Some users may be unwilling to pay a monthly fee for a dating application, even at a low cost. This could reduce the number of paid members and impact the sustainability of the service.

3. **Competitive Market:**
   - The online dating market is highly competitive, with several well-known applications already available. Competing against established platforms may make it difficult for the application to gain visibility and market share.

5.2 Technical

1. **Matching Accuracy:**
   - There is a risk that the system's matching logic may not accurately identify compatible users. Poor match recommendations could lead to user dissatisfaction and reduced engagement.

2. **Data Security and Privacy:**
   - The application will store sensitive personal, professional, and payment information. Any security weaknesses could lead to data breaches and loss of user trust.

3. **System Performance and Scalability:**
   - As the number of users grows, the system may experience performance issues as slow response times or difficulty handling increased traffic.

6. Stakeholder Summary

6.1 Project Team

Name	Responsibilities
Unish Pandey	Responsible for backend development and database design. Supports the implementation and integration of core system functionality.
Kyan Oberas	Taking on the role of Scrum Master by organizing team meetings and tracking task progress. Contributes to the development tasks and supports team collaborations.
Mason L'Etoile	Responsible for the design of the application's user interface. Implements and refines frontend application features.
Joseph Jaikaran	Responsible for testing and quality assurance. Validates system functionality and assists with issue resolution and documentation updates.
Ahmed Elmardi O Ibrahim	Responsible for security and data protection. Ensures user data is safeguarded and monitors system security for reliable app operation.

6.2 Functional Roles ("Users")

Name	Description
Non-Member	A user with a registered account who does not have an active subscription. This user can browse other profiles, but cannot interact with them or create their own profile.
Member	A subscribed user who has paid for a membership. This user has full access to features such as profile creation, unlimited messaging, priority matching, increased profile boost, and visibility.
Admin	A system user responsible for managing user accounts, memberships, reports, and system data to ensure proper platform operation.

7. Product Backlog (Functional Requirements)

Priority	As a	I want to	So that I can	Relative Estimate	Estimated Cost
1	Non-member	Create an account and log in to the application	Access the platform securely with ease	2	$520.00
2	Member	Create a personal profile with personal details including name, contact information, physical attributes, and upload a profile picture	Present accurate personal information to potential matches	3	$780.00
3	Member	Create a professional profile with job title, work type, salary, current employer, and skills	Be matched with like-minded and compatible IT professionals	3	$780.00
4	Member	Specify my dating preferences and desired partner attributes	Inform the system of what I'm looking for in a match	2	$520.00
5	System	Calculate compatibility scores between member profiles based on personal, professional, and preference data	Generate meaningful match recommendations without requiring members to manually search	8	$2,080.00
6	Member	View a list of recommended matches	Identify the most potential connections quickly	3	$780.00
7	Member	View the complete profile of a recommended match including photos, personal details, and professional background	Make informed decisions about who to connect with	2	$520.00
8	Member	Send and receive messages with matched users	Communicate before meeting in person	5	$1,300.00
9	System	Recommend a specific date, time, location, and activity type for a first meeting between two matched members	Eliminate planning friction and coordinate the first date automatically	5	$1,300.00
10	Member	Accept or decline the system-recommended first date details	Control when and where I meet matches	1	$260.00

11	Member	Complete a post-date survey rating the experience	Provide feedback on the date experience to improve future match quality	2	$520.00
12	System	Analyze post-date survey data to refine matching algorithms	Continuously improve match quality based on actual outcomes	5	$1,300.00
13	Non-Member	Browse member profiles with limited information (excluding contact details and professional information)	Evaluate the platform and user base before subscribing	3	$780.00
14	Non-Member	Subscribe to the service using monthly payments	Gain full access to all platform features and begin matching	2	$520.00
15	Member	Update my subscription payment method or cancel my membership	Manage my billing preferences	2	$520.00
16	Non-Member	See which features require paid membership while browsing	Understand the value of the service before subscribing	1	$260.00
17	Admin	View and manage user accounts	Monitor platform usage and ensure the system operates correctly	3	$780.00
18	Admin	Manage memberships and subscription status including activation, suspension, or cancellation	Enforce platform policies and handle billing issues	3	$780.00
19	Admin	Review post-date survey results and satisfaction metrics	Monitor platform effectiveness and user satisfaction	2	$520.00
20	Member	Log out of the application securely	Protect my account when using shared or public devices	1	$260.00
				58	**$15,080**

1 Story Point is worth the following Person-Hours:	**4**	**Velocity:**	**15**

8. Non-Functional Requirements

Non-Functional Requirements
1. **Security:** The system must ensure that all user data, including personal, professional, and payment information, is securely stored and transmitted using industry-standard security practices.
2. **Performance:** The system must provide acceptable response times when users are browsing profiles, viewing matches, or completing actions such as registration and subscription.
3. **Availability:** The system should be available to users at all times, except during scheduled maintenance or unexpected outages.
4. **Usability:** The system must provide a clear and easy to use interface so that users can navigate profiles, matches, and subscriptions without requiring additional training or support.

9. Cost Estimate

Labour	Skill	Qty	Loaded Rate	Project Hours	Total
	Frontend Developer	1	$65.00	47	$3,055.00
	Backend Developer	1	$65.00	47	$3,055.00
	Tester/QA	1	$65.00	47	$3,055.00
	Cybersecurity Specialist	1	$65.00	47	$3,055.00
	Scrum Master/Developer	1	$65.00	47	$3,055.00
Travel and Related Expenses					$0.00
Cloud Hosting Fees	Amazon Web Services	4 months			$600.00
	Supabase Pro	4 months			$100.00
	Development Tools				$500.00
Contingency		25%			$4,120.00
Budget Total					$20,595.00

9.1 Cost Assumptions

Project Schedule

- The project is planned to be completed over four sprints, with each sprint lasting 2 weeks, for a total development duration of 8 weeks

Labour Rate

- A loaded labour rate of $65 per hour is assumed. This rate includes the base hourly wage plus an additional 30% to account for employee benefits such as vacation and sick leave

Team Allocation

- The development team consists of five members, all of whom will work part-time on the project for the duration of development. All development work will be completed internally, with no outsourcing

Effort Estimation

- The product backlog consists of 58 story points across all functional requirements. Each story point is assumed to represent four hours of development effort, resulting in a total of 232 development hours

Work Distribution

- Development effort is assumed to be distributed evenly across team members, resulting in approximately 47 hours of work per team member over the course of the project

Velocity Assumption

- Based on the total number of story points and project timeline, the team is targeting a development velocity of approximately 15 story points per sprint

Cloud Hosting Costs

- Cloud infrastructure costs are estimated based on the use of AWS for backend hosting at $150 per month, and Supabase Pro for database services at $25 per month, over a four-month period

Development Tools

- Development tool costs include integrated development environments (IDEs), Git for version control, and project management software. These tools are assumed to be subscription-based or low-cost and are included as a separate line item in the cost estimate

Travel Costs

- No travel-related expenses are anticipated, as all team members will be working remotely

Contingency

- A contingency of 25% has been applied to account for uncertainty, scope changes, and unforeseen technical or scheduling risks
